## håkan P110 pop killer

The **Håkan P110 Pop Killer** from Swedish microphone specialist mikrofonen.se is a very special pop killer that is specifically designed to effectively prevent plosives (pops) and, at the same time, to eliminate the audible colouration that other pop filters often display. It is extremely effective in killing pops without compromising the frequency response and character of the microphone.

The foam used in the P110 was carefully researched to maximise pop protection and minimise colouration - the specially selected foam is "hydrophobic" – this means that it will not absorb water. So moisture from the breath will not be absorbed by the foam and therefore does not stay on the filter to distort and colour the sound; it also makes it easy to clean.

## Usage Notes:

Like any pop filter, the Håkan Pop Killer needs to have some space between it and the microphone to work effectively.

-	Description         as standard with a black frame (with the exception of the Brauner         The hydrophobic foam filter is 11cm in diameter and 20mm thick.         Version with a 3/8" microphone thread for fitting to a microphone stand or gooseneck         Version with an integral gooseneck with a 3/4" clamp for attaching to a standard microphone stand - gooseneck is 33cm long excluding clamp         As above, but with a clamp for larger microphone stands with a diameter of up to 1"	UK Price <u>excl.
